

### **AMENDMENT TO THE TITLE**

Please replace the title in its entirety with the following replacement title:

--MOBILE INFORMATION TERMINAL HAVING OPERATION KEYS AND A DISPLAY ON OPPOSITE SIDES--.

### **AMENDMENT TO THE SPECIFICATION**

**Please replace paragraph [0036] with the following rewritten paragraph:**

[0036] Furthermore, a processing operation to start and/or to stop an application program preset by an operator, a processing operation to connect mobile information terminal 1 with another preset apparatus through a network to which mobile information terminal 1 can be connected and to start and/or to stop communication with the apparatus, and/or a processing operation to display and/or to delete an image indicating selection information such as a list of stored application programs, may be executed when one or more predetermined keys of operation keys 3 are half-depressed or lightly touched. In a case where the image indicating selection information is displayed, the selection operation associated with this action may be performed with operation keys 3. However, this operation may be performed with another input device, which enables information to be input, without the need for display device 2, such as through a touch sensor, a pointing device, an operation key(s) disposed on front side 1a or a side surface, or a small number of operation keys which is disposed at another position of rear side [[1a]] 1b away from operation keys 3, or which has a size, a shape and the like that are different from those of operation keys 3.
